

DCAA Compliance

Intelligent compliance inside your ERP

Built for government contractors that need accuracy, control and audit readiness. Labor, billing, indirect rates and audit documentation all need to stay aligned.

DCAA Compliance from 3Value extends Acumatica with DCAA-specific controls for timekeeping, provisional and billing rates, contract and CLIN management, manufacturing cost reconciliation, SAM.gov checks and audit reporting.

The result is a more controlled, audit-ready accounting environment with stronger visibility, cleaner records and greater confidence in every transaction.

Built to Support DCAA Requirements

Timekeeping and Labor Traceability. Enforce same-day time entry and approval, a 24-hour grace window and employee-to-project validation. Released entries remain locked while backdated corrections and hold removals require a documented reason.

Indirect Cost Management. Maintain provisional rates for fringe, overhead, G&A, subcontract and material handling. Reconcile estimated rates against actual costs.

Billing Rate Recognition. Apply contract-specific billing logic, project and task rate overrides and CLIN-level controls. Track contract and CLIN ceilings with warnings at 90% and 100%.

Cost Allowability. Map indirect pool accounts and allocation bases, identify unallowable accounts and associate each unallowable account with its applicable FAR 31.205 reference.

Audit Package Prep. Produce 47 DCAA-focused reports covering rates, variances, indirect pools, unallowable costs and more.

Compliance Operations Inside Acumatica

DCAA Compliance is built as a native Acumatica extension. DCAA rules are enabled only for projects marked DCAA Compliant, allowing government and commercial work to coexist in the same Acumatica environment. It extends Project Accounting, Time & Expenses and Manufacturing rather than replacing core ERP workflows.

The Operational Outcomes of Using DCAA Compliance

Stronger Audit Readiness

Compliance evidence is built throughout the process, not assembled after the fact.

Better Cost Accounting Accuracy

Rates, cost pools, labor, expenses and billing rules stay connected to the underlying ERP data.

Reduced Manual Effort

Teams spend less time chasing spreadsheets, screenshots and disconnected support files.

More Confident Billing

Billing logic aligns with contract type, CLIN structure and approved rates.

Tighter Operational Control

Approvals, exceptions and variance are visible before they become audit findings.

Designed for Accuracy, Control and Audit Readiness

DCAA Compliance gives finance, contract administration, project management and operations a shared compliance foundation. It creates a more disciplined environment where users can see what was entered, who approved it, what changed, why it changed and how it affects contract billing.

Provisional rate reconciliation

Time and expense management

Billing rate recognition

CLIN and ceiling reconciliation

Manufacturing reconciliation

SAM.gov integration

Reporting and audit documentation

Bottom Line

DCAA Compliance helps government contractors turn compliance from a periodic scramble into a controlled, repeatable ERP-driven process.
