

# Operation Time Management (OTM)

OTM gives production teams a simple way to capture labor, production activity, completed quantities and scrap directly from the shop floor.

Instead of relying on paper travelers, delayed updates or back-office data entry, employees can scan in, find their next job, clock into production work and record quantities and scrap as the work happens.

## WHY OTM

Production data loses value when it is entered late. OTM captures labor and production activity as work happens, giving supervisors and Acumatica more accurate information from the floor

## HOW IT WORKS

Employees access Operation Time Management from a shared terminal or shop floor workstation, sign in, select or scan the job and complete guided production actions that feed activity back into Acumatica.

## BUSINESS IMPACT

Reduce manual data entry, improve labor accuracy and give supervisors cleaner production data without slowing down the shop floor.

## WHAT IT DOES

- ✓ Employee sign-in
- ✓ Production clock in/out
- ✓ Dispatch by work center
- ✓ Produced quantity capture
- ✓ Scrap quantity capture
- ✓ Regular time tracking

## KEY FEATURES

- ✓ Shared secure kiosk
- ✓ Barcode and QR scanning
- ✓ Dispatch by work center
- ✓ Automatic shift breaks
- ✓ Supervisor issue alerts
- ✓ Time reconciliation

## PERFORMANCE

- ✓ Real-time labor capture
- ✓ Less manual entry
- ✓ More accurate production data
- ✓ Faster issue escalation

*Shop floor visibility is not a reporting problem. It is a data capture problem.*
